     - Update

- **Guest User**
  1. Items
     - Select
     - Select…where
  2. Orders
     - Insert (cart)
  3. Profile
     - Insert (register)

OUTLINE OF CONTENTS

******* PROJECT FOLDER *******

A. **Project Main**

- index.php
  - Stores user session
- register.php
  - INSERT INTO users
  - Uses post method
  - Password gets hashed
  - Checks verification for:
    - empty/null fields
    - an existing email
    - password mismatch
- login.php
  - SELECT…WHERE administrators
  - SELECT…WHERE users
  - Uses post method
  - Activates user/admin session
  - Compares input to hash password
  - Checks verification for:
    - empty/null fields
    - nonexistent email
    - password mismatch
- logout.php
  - destroys the active user session
- main.css
  - style sheet

1. Inc
   - db_connect.php
     - Connects to database
       - Try/catch statement
   - error.php
     - Displays when verification fails

******* USER TYPE: ADMIN *******

B. **Admin User**

- Items
  - index.php
    - SELECT FROM categories
    - SELECT…WHERE categories

        - SELECT FROM items
        - retrieves category ID
    - viewItems.php
        - list of categories
        - table of items
        - passes item ID and category ID values as parameters
    - updateItemForm.php
        - SELECT…WHERE items
        - SELECT FROM categories
        - retrieves item ID and category ID parameter values
        - passes item ID as parameter
    - updateItem.php
        - UPDATE…WHERE items
        - fetches & validates inputs
            - not null/false/negative
    - addItemsForm.php
        - SELECT FROM categories
    - addItems.php
        - SELECT COUNT items
        - INSERT INTO items
        - fetches & validates inputs:
            - not null/false/negative
            - unique item code

- Orders
    - index.php
        - SELECT FROM orders
        - table of orders
        - passes order ID as parameter
    - addLineForm.php
        - SELECT…WHERE items
        - SELECT…WHERE orderItems
        - table of order line items
        - retrieves order ID parameter
        - passes order ID and user ID values as parameters
    - addLine.php
        - SELECT…WHERE items
        - INSERT INTO orderItems
        - fetches & validates inputs:
            - not null/false/negative
        - calculates discount & item cost based on quantity entered

- Profile
    - index.php
        - SELECT FROM users

        - table of users
        - passes user ID as parameter
    - addUserForm.php
        - Uses post method
    - addUser.php
        - SELECT COUNT users
        - INSERT INTO users
        - Password gets hashed
        - Uses post method
        - fetches & validates inputs:
            - not null/false
            - email must be unique
    - updateUserForm.php
        - SELECT…WHERE users
        - retrieves user ID parameter
    - updateUser.php
        - UPDATE…WHERE users
        - fetches & validates inputs:
            - not null/false

******* USER TYPE: REGISTERED *******

C. **Registered User**

- Items
    - index.php
        - SELECT FROM categories
        - SELECT…WHERE items
        - SELECT…WHERE orderItems
        - declares item and category IDs
        - error message verification:
            - not null/false
    - viewItems.php
        - dropdown list of categories
        - table of items of categories
            - passes category ID and item ID as parameters
        - details of item selected
            - passes item ID, item price, discount sale, and item name as parameters
    - viewCart.php
        - Uses session to store cart
        - displays table of items added
    - addToCart.php
        - establishes the session
        - select an array row for orderItems

        - insert row into cart
    - emptyCart.php
        - disconnects the session and empties the array

- Orders
    - index.php
        - SELECT…WHERE orders
        - table of orders
            - only shows orders placed by the user
        - passes order ID as a parameter
    - addOrderForm.php
        - SELECT FROM orders
        - SELECT FROM users
        - uses the session user id
        - uses post method
    - addOrder.php
        - INSERT INTO orders
        - fetches and validates inputs:
            - not null/false
    - addOrderLine.php
        - SELECT…WHERE items
        - SELECT…WHERE orderItems
        - table of items inside the selected order
        - uses post method
    - addLine.php
        - SELECT…WHERE items
        - INSERT INTO orderItems
        - fetches and validates inputs:
            - not null/false/negative

- Profile
    - index.php
        - SELECT…WHERE users
        - Session user set as user ID
        - passes user ID as parameter
    - updateUserForm.php
        - SELECT…WHERE users
        - filters & validates inputs:
            - cannot be null
        - passes user ID as parameter
    - updateUser.php
        - UPDATE…WHERE users
        - filters & validates inputs:
            - not null/false

******* USER TYPE: GUEST *******

D. **Guest User**

- index.php
  - stores guest session
- Items
  - index.php
    - SELECT FROM categories
    - SELECT…WHERE items
    - SELECT…WHERE orderItems
    - declares item and category IDs
    - error message verification:
      - not null/false
  - viewItems.php
    - dropdown list of categories
    - table of items of categories
      - passes category ID and item ID as parameters
    - details of item selected
      - passes item ID, item price, discount sale, and item name as parameters
  - viewCart.php
    - uses session to store cart values
    - displays table of items added
    - calculates order total
  - addToCart.php
    - establishes the session
    - select an array row for orderItems
    - insert row into cart
  - emptyCart.php
    - empties the session array
  - addOrderForm.php
    - SELECT FROM orders
    - drop down list
    - passes order ID as parameter
    - uses post method
  - addOrder.php
    - INSERT INTO orders
    - filters and validates input
      - not null/false/negative
    - uses post method
  - confirmation.php
    - confirms the order went through
    - provides the order reference number
